

Difference War

Materials:

- One Deck of Playing cards
- Approximately 40 counters per pair of students

Rules:

- Students each get half of the deck (A = 1, J = 11, Q = 12, K = 13).
- Each player takes the top card of their stack and flips it face up on the table. Players work together to find the difference between the two cards using the counters.
- Players must work together to agree on the difference using the counters. The player with the larger value card wins as many counters as the difference between the two cards.
- If the difference between the two cards is 0, no player earns counters. Players remove the cards from play and deal their next cards.
- Players keep their cards.
- The game is over when the pile of counters runs out.
- The player with the most counters wins.
